

Lecture 24:-

DFA to NFA.

1- Union.

✓ 2- Concatenation.

3- Closure.

Ex.

$$\gamma_1 \gamma_2 \neq \gamma_2 \gamma_1$$

$$(\gamma_1 + \gamma_2) = (\gamma_2 + \gamma_1)$$

FA1 FA2.

Step 1:- Delete initial of FA2.

Step 2:- Delete final of FA2.

Step 3:- FA1's final additional transition will same as that of FA2's initial.

Ex.

Null string λ

Null String λ
 Null transition ϵ, Λ
 Null state \emptyset

Ex:-

FA2.

DFA to NFA.

1. Union.

2. Concatenation.

✓ 3. Closure.

Ex:-

FA* ?

1. Delete Initial.
2. Add state (Declaring it as both initial & final).
3. Add transition of the added state Equal to previous initial.
4. Add additional transition for original final Equal to original initial.

?

REGEX To NFA.

1. \emptyset ϵ transition on an edge so drop.

$(a+b)^* cd^*$
